June 2026 Quarterly Activities Report

The June 2026 Quarter was another highly successful period for **Solstice** with ongoing drilling continuing to demonstrate the scale and growth potential of the 100%-owned **Nanadie Copper-Gold Project**. Results from Phase 2 drilling have extended mineralisation well beyond the current Mineral Resource boundary in multiple directions, demonstrating clear potential to expand an already significant deposit into a **standout large-volume copper-gold system in WA's premier Goldfields mining jurisdiction**. With $45 million cash and no debt, Solstice is well positioned to continue growing Nanadie while advancing exploration across its Eastern Goldfields portfolio.

Nanadie Highlights

- **Phase 2 Reverse Circulation (RC) and diamond drilling** continued throughout the Quarter, testing multiple targets across a mineralised system currently 100-200m wide, extending over at least 1.2km of strike, remaining open to the north and south, and completely open at depth.
- **Phase 2 drilling delivered an exceptional combined RC and diamond 'tail' intercept** in **NANRCD004** of:
  - **629.1m @ 0.50% Cu, 0.17g/t Au from surface to end of hole (EOH)[1]** (including all unmineralised intervals), **a result comparable to that seen in globally significant copper systems.**
- NANRCD004 was drilled to extend RC hole NANRC004, which intersected **62m @ 1.55% Cu, 0.66g/t Au**[2], confirming the continuity of copper-gold mineralisation **more than 300m below the current Mineral Resource Estimate** (**MRE**) boundary. Key intercepts[1] included:
  - **30.7m @ 1.41% Cu, 0.34g/t Au** incl. **15m @ 2.12% Cu, 0.47g/t Au**
  - **37.8m @ 0.87% Cu, 0.25g/t Au** incl. **22.5m @ 1.10% Cu, 0.31g/t Au**
  - **33m @ 0.66% Cu**, **0.22g/t Au** incl. **18m @ 0.80% Cu, 0.30g/t Au**
  - **15m @ 0.78% Cu, 0.21g/t Au**, and
  - **37m @ 0.44% Cu, 0.15g/t Au**
- Copper-gold assays in NANRDC004 **closely match previously reported zones of visible chalcopyrite (copper sulphide) mineralisation**[3] and provide confidence in in nearby drillhole **NANRCD005** as well as in the remaining diamond tails currently being processed or at the assay laboratory.
- Initial results from Phase 2 RC drilling have **extended mineralisation at least 160m to the north of the current MRE boundary**, with intercepts including **44m @ 0.52% Cu, 0.14g/t Au** in NANRC030, within a broader combined anomalous intercept of **112m @ 0.44% Cu, 0.14g/t Au, 32m @ 0.60% Cu, 0.18g/t Au EOH** in NANRC029, and **26m @ 0.60% Cu, 0.13g/t Au** and **14m @ 0.89% Cu, 0.46g/t Au** in NANRC028[4].

- Nanadie currently has a shallow Inferred **Mineral Resource Estimate (MRE) of 40.4Mt** containing **162,000t of copper** and **130,000oz of gold**[5] within a large, granted Mining Lease. Solstice's drilling is demonstrating clear potential to materially expand the MRE.
- Upgraded field infrastructure is now in place to support an accelerated drilling campaign, with RC drilling focused on systematic infill of higher-grade zones, strike extensions and pre-collars for future diamond tails, while diamond drilling continues to test down-plunge extensions and depth continuity beneath existing mineralisation across the entire system.
- An independent geological review, supported by ongoing drillhole logging, has significantly refined Solstice's geological model for the mineralised system. The revised model highlights strong genetic similarities with the nearby **Stark** deposit and has identified **multiple high-priority strike targets**[6].
- Processing of diamond core and dispatch of diamond and RC samples continues, with assays pending from a further 12 completed diamond holes and 26 RC holes, which will generate a **steady stream of exploration news flow over the coming months**.

Managing Director's Comment

Solstice Minerals' Chief Executive Officer and Managing Director, Mr Nick Castleden, said:

"Our Phase 2 RC and diamond drilling campaign at Nanadie continues to reinforce our view that Nanadie represents a much larger copper-gold system than previously recognised. The deposit remains open at both ends and recent drilling, particularly NANRCD004, shows that significant higher-grade positions extend well beyond the current MRE boundary and can be incorporated into future resource upgrades. We eagerly await the results from follow-up diamond tail NANRCD005, which is interpreted to extend the host geology approximately 500m below the MRE boundary, as well as the results from a further 12 tails drilled along the length of the mineralised system.

"Just as importantly, recent drilling and the zones identified in an outstanding Phase 1 RC program earlier in the year are helping us identify where the higher-grade parts of the system are likely to continue – and this will be a key focus of the ongoing drilling. Supported by the upgraded field infrastructure now in place, we are exceptionally well placed to systematically pursue multiple pathways toward meaningful resource growth – along strike, laterally and at depth as well targeted in-fill drilling within the existing MRE.

"Against the backdrop of favourable long-term supply-demand fundamentals, investable copper growth projects in Tier-1 mining jurisdictions are becoming increasingly scarce. With approximately $45 million in cash and no debt, Solstice is in an enviable position to maintain sustained drilling at Nanadie and unlock its full potential as a significant, high-volume copper-gold deposit on granted mining tenure and in a favourable WA Goldfields location. We have the targets and the financial capacity to vigorously explore this open-ended system and with the goal of materially expanding the MRE over time."

Solstice Minerals Limited (**Solstice** or the **Company**) is pleased to present its Quarterly Activities Report for the period ended 30 June 2026.

1. EXPLORATION OPERATIONS

Nanadie Copper Gold Project

The June Quarter saw a sustained **Phase 2** drilling campaign advance at the advanced 100%-owned **Nanadie Copper-Gold Project**, located northwest of Sandstone in WA's Goldfields, with **26 RC holes** for 7,650m and **13 diamond 'tails'** completed for 3,084m (**Figure 1** and **Table 1**). Drilling activity accelerated following the successful Phase 1 RC program, which returned numerous significant wide, high-grade drill results and a multitude of intercepts at or above MRE grade.

Upgraded field infrastructure is now in place to support faster core processing and sampling, and additional camp facilities are being installed to facilitate multi-rig drilling going forward. **Samples from all holes drilled during the period are now either processed or at the lab, and the Company is expecting significant assay flow in the coming months.**

Pleasingly, initial RC and diamond assays returned to date **continue to demonstrate clear potential to expand an already significant deposit into a standout large-volume copper-gold system in WA's premier Goldfields mining jurisdiction**.

Nanadie Diamond Drilling Results

Exceptional wide copper-gold intercepts were returned from the first completed diamond tail NANRCD004[1], confirming that the system extends to depths of more than 600m and opening a number of new high-grade zones. The hole was drilled to extend Phase 1 RC hole NANRC004 (which intersected **62m @ 1.55% Cu**, **0.66g/t Au EOH** including a best-ever intercept of **22m @ 2.78% Cu**, **1.25g/t Au**)[2] with a diamond tail drilled from 317.5m to a final depth of **629.1m**.

Geological logging in the diamond tail identified zones of **chalcopyrite mineralisation in multiple locations downhole**, predominantly occurring as disseminations, fabric-parallel veinlets and cross-cutting sulphide veins, often separated by post-mineral felsic and mafic dykes. Assay results correspond closely to the logged sulphide intervals, with significant intercepts including[1]:

- **30.7m @ 1.41% Cu, 0.34g/t Au** incl. **15m @ 2.12% Cu, 0.47g/t Au**
- **37.8m @ 0.87% Cu, 0.25g/t Au** incl. **22.5m @ 1.10% Cu, 0.31g/t Au**
- **33m @ 0.66% Cu, 0.22g/t Au** incl. **18m @ 0.80% Cu, 0.30g/t Au**
- **15m @ 0.78% Cu, 0.21g/t Au**
- **37m @ 0.44% Cu, 0.15g/t Au**

The results are shown in plan view in **Figure 1** and cross-section in **Figure 2**, and in oblique view in **Figure 3**. Diamond tail details and significant intercepts are shown in **Table 1**.

Combined RC and diamond assays highlight NANRCD004 as an exceptionally mineralised drillhole, with a combined intercept (inclusive of oxide material and zones of unmineralised waste) of **629.1m @ 0.50% Cu, 0.17g/t Au** from surface to end of hole[1] (**Figure 1**), a result **comparable to the length and grade of drill results commonly reported from large-scale, Andean copper-gold systems**.

Importantly, Nanadie sits on a granted Mining Lease (ML) in flat terrain in Western Australia.

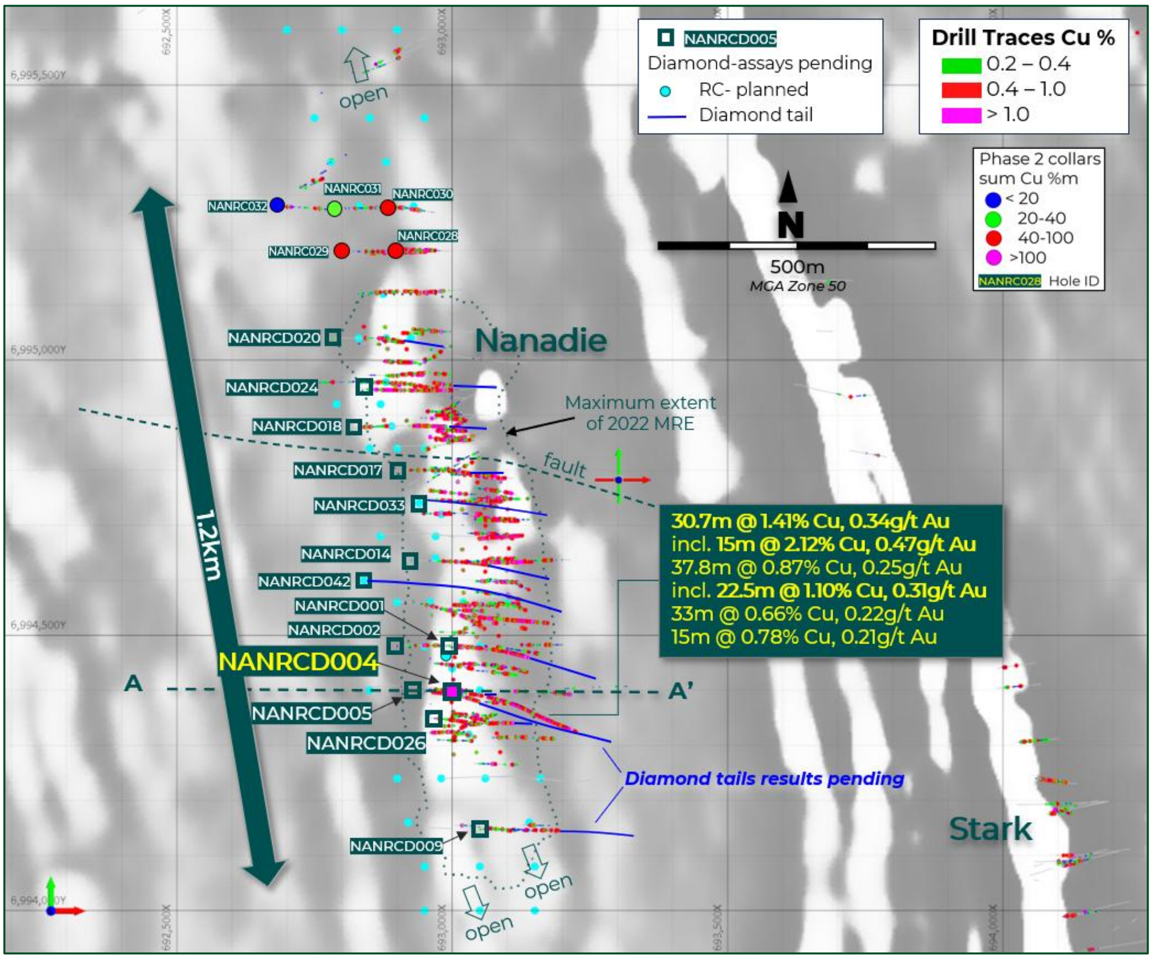

Figure 1. Nanadie Deposit aeromagnetic imagery and downhole copper values in previous drillingprojected to surface[1,2,4,5], showing projected copper values in NANRCD004, significant intercepts[1], and other drillholes extended with diamond tails (labelled, blue lines). Reported Phase 2 RC holes are labelled.

The results extend the depth of the mineralised system more than 300m beyond the MRE boundary and **provide conclusive evidence that this part of the deposit hosts multiple zones of wide high-grade mineralisation**, particularly within alteration and deformation zones along the eastern margin of the gabbro body.

The Company intends to continue exploring the dimensions and plunge component of these zones through targeted follow-up RC and diamond drillholes, as well as test the potential for zones to extend upward into under-explored portions within the current MRE boundary.

The remaining 12 diamond tails (Figure 1) are largely processed or already at the laboratory with assays pending. Importantly, the results from NANRCD004 represent a strong validation of the visual mineralisation observed (**Photo 1**) in reported hole NANRCD005 and provide confidence in other recently completed diamond holes.

Laboratory results are expected progressively over the coming months.

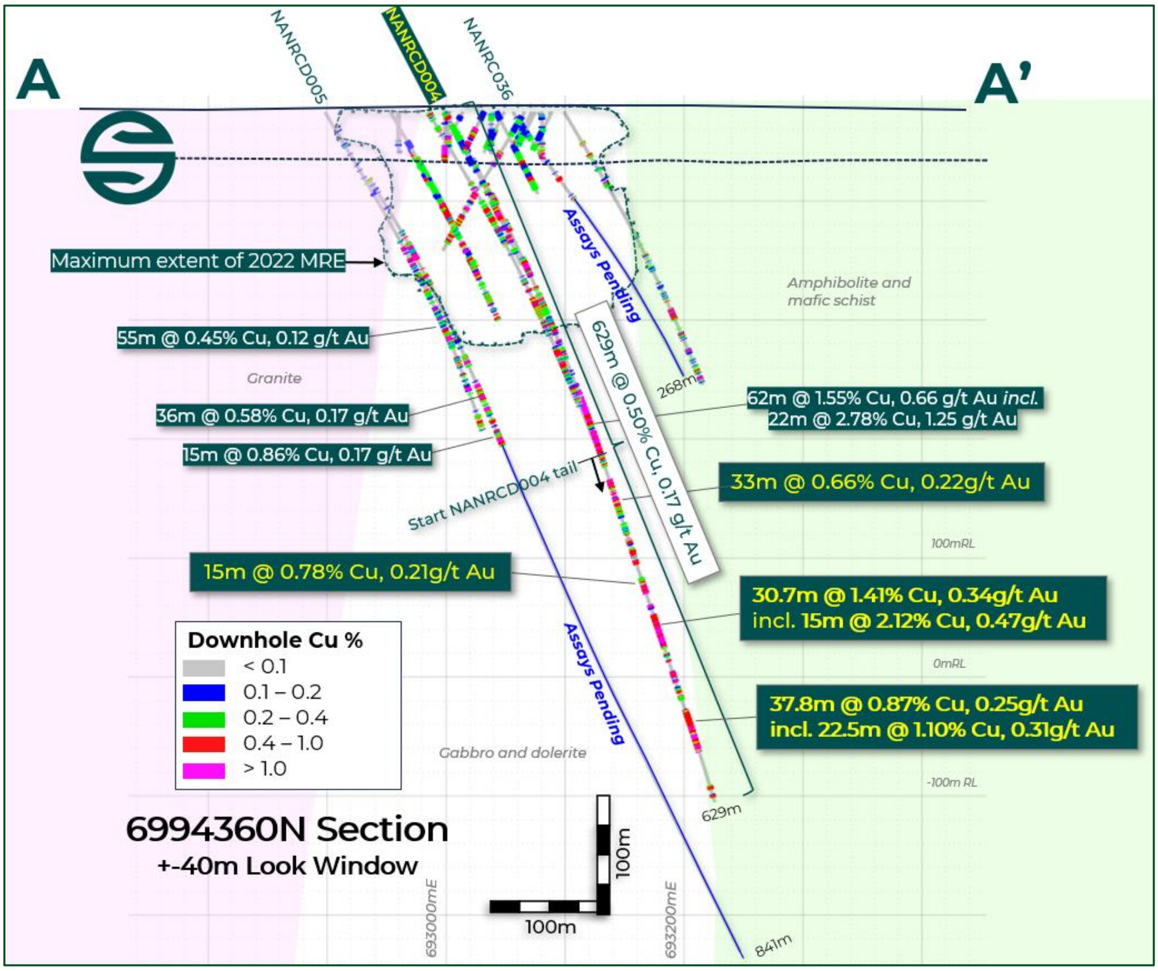

Figure 2. Nanadie Deposit cross-section 6994360N showing NANRCD004 assay results[1], simplified geology, and trace of follow-up NANRDC005 diamond tail. Also shown Phase 1 RC intercepts (white text)[2], historical drilling[5], and the boundary of the 2022 MRE block model.

Nanadie EIS Co-Funding

During the Quarter Solstice was awarded a co-funded **drilling grant** of up to **$200,000** (the maximum award) under Round 33 of the West Australian Government's **Exploration Incentive Scheme** (**EIS**) – for 50% of direct drilling costs. The EIS funding award is a strong independent validation of the quality of the Nanadie Copper-Gold Project, and the advances Solstice has made since acquisition. The funds will be applied to step-down exploration as plunge corridors are fully defined.

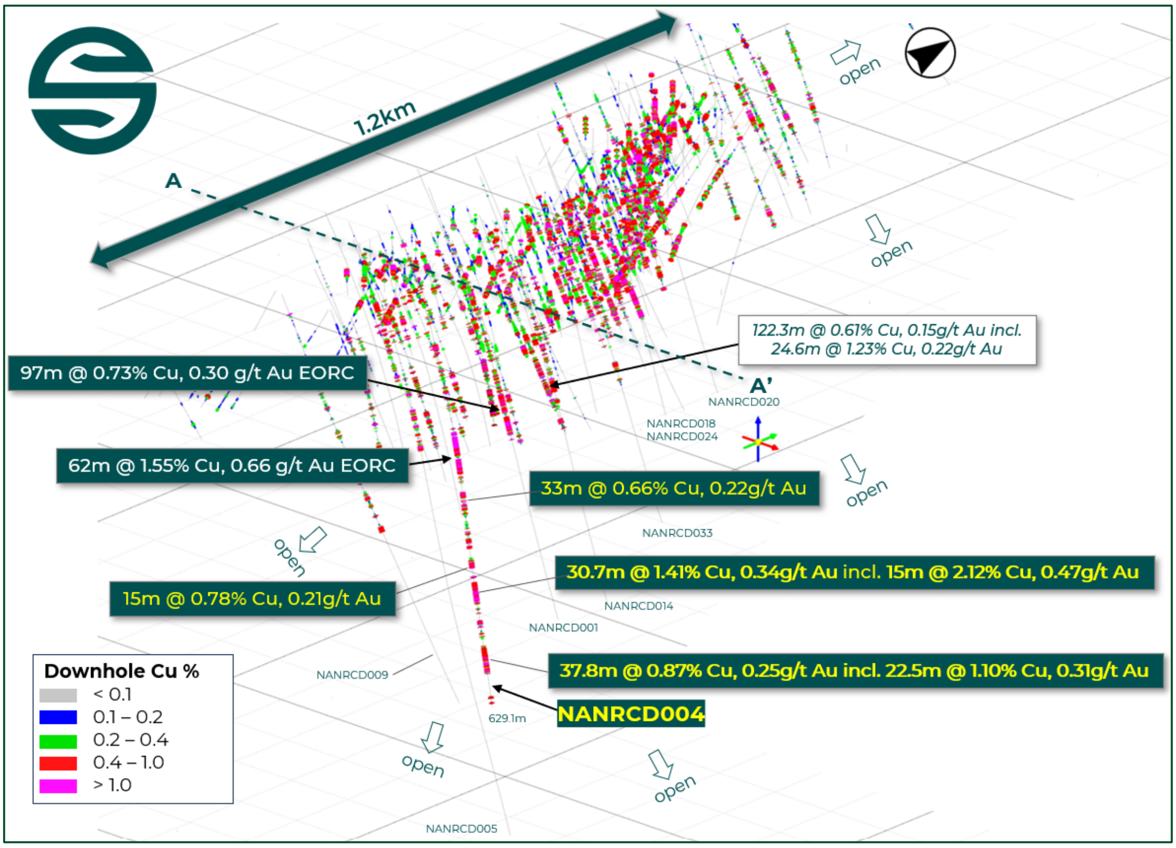

Figure 3. Oblique view of copper values in drilling at the Nanadie Deposit, showing NANRCD004 diamond tail intercepts (yellow text)[1], remaining tails with assays pending (labelled), key Phase 1 RC and historical intercepts (white text)[2,5], and historical drill traces.

Nanadie RC Drilling Results

RC drilling continues at site, as part of an extended >13,000m Phase 2 program of step-out exploration, Mineral Resource delineation and 'pre-collar' holes designated for the next diamond tails.

Five Phase 2 RC holes have been reported to date (**NANRC028-NANRC032**) at the northern extent of the deposit (**Figure 4**), successfully extending copper-gold mineralisation approximately 160m north of the current MRE, and confirming significant copper intercepts to the limit of drilling with a strong correlation with IP chargeability features[7] that extend further to the north. Significant intercepts include[4]:

- **44m @ 0.52% Cu, 0.14g/t Au** in NANRC030
- **32m @ 0.60% Cu, 0.18g/t Au EOH** in NANRC029
- **26m @ 0.60% Cu, 0.13g/t Au**, and **14m @ 0.89% Cu, 0.46g/t Au** in NANRC028
- **11m @ 0.50% Cu. 0.11g/t Au** in NANRC032

RC holes NANRC028 and NANRC030 are particularly broadly mineralised, with combined anomalous intercepts (inclusive of oxide material and zones of unmineralised waste) of **112m @ 0.44% Cu, 0.14g/t Au** and **128m @ 0.32% Cu, 0.09g/t Au** respectively[4].

RC drilling over the Quarter has subsequently completed a series of pre-collar drillholes throughout the deposit and several 80m step-out traverses at the southern end of the deposit, where there are also untested IP features.

Observed geology continues to be broadly consistent with that seen in the Company's Phase 1 RC drilling and indicates the presence of a much larger copper-gold system than previously recognised, with potential to benefit from emerging higher-grade zones that may enhance the grade profile of any future Mineral Resource Estimate updates.

Photo 1. Core tray photos of altered gabbro in NANRCD004 from 478.1m to 489.1m (11.0m), with chalcopyrite (cpy) and pyrrhotite (po) sulphide zones labelled alongside copper assays[1]. These trays are part of a 27.6m zone that was logged as averaging 3% logged visual chalcopyrite[3] that has subsequently returned an intercept of 30.7m @ 1.41% Cu and 0.34g/t Au from 461.5m

All samples from the remaining 23 RC drillholes completed over the Quarter (Table 2) are at the laboratory and are expected to be reported in batches over the coming months.

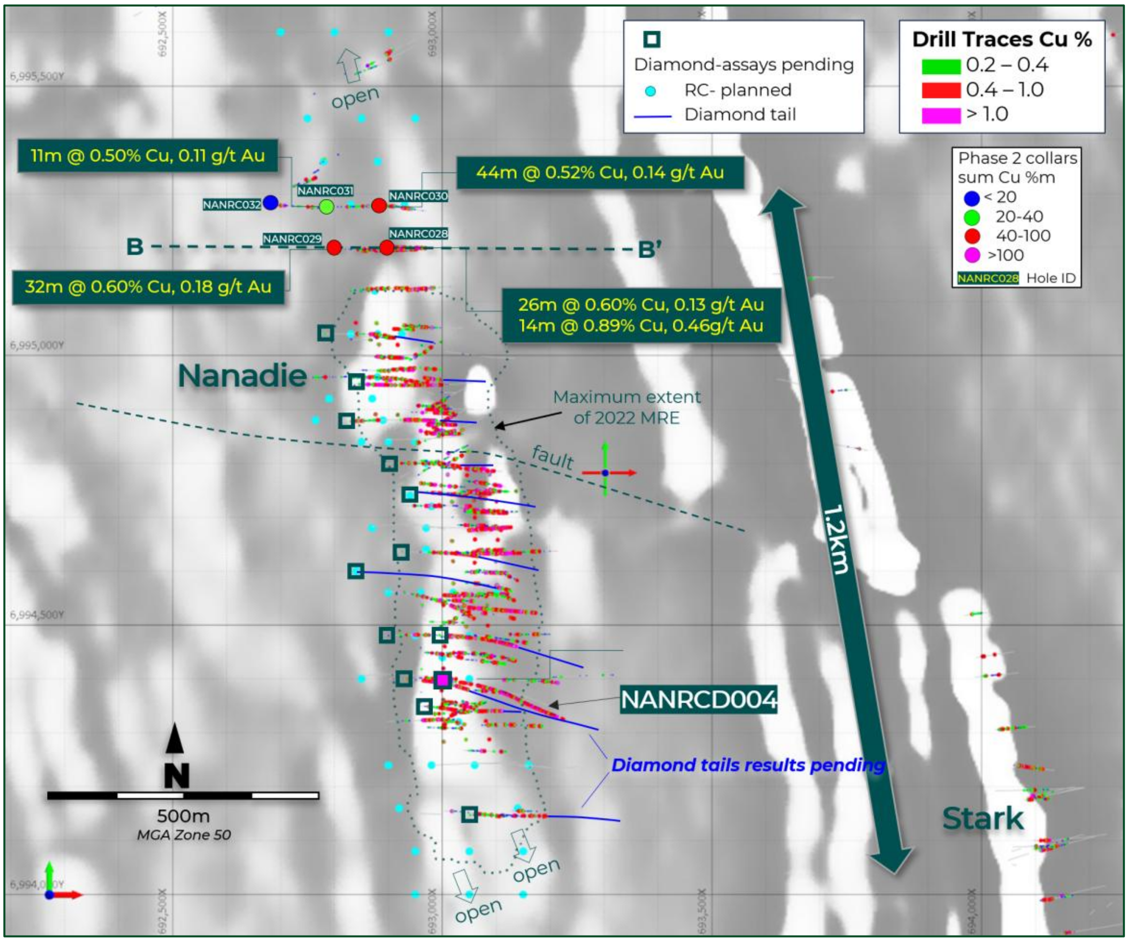

Figure 4. Nanadie Deposit aeromagnetic imagery and downhole copper values in previous drilling[1,2,4,5] projected to surface, showing the location of RC drillholes reported over the Quarter, drillholes extended with diamond tails (labelled), and current completed and planned Phase 2 RC drill collars (blue dots).

Nanadie Geological Model

An independent geological review completed during the Quarter updated the Nanadie geological model, resulting in a significantly expanded exploration 'search window'[6]. The review highlights that the nearby **Stark** copper prospect, located 1km to the southeast of Nanadie (**Figure 5**), sits in the same primary geological setting and shares many of the same characteristics.

The updated geological model suggests that both deposits have a broad accumulation of disseminated copper-gold mineralisation in an intrusive setting, followed by remobilisation during a deformation, felsic intrusion and alteration event likely responsible for the wide zones of high-grade mineralisation encountered to date (results of up to **62m @ 1.55% Cu 0.66g/t Au**[2]).

The review is consistent with drilling observations, with significant zones of >1% Cu occurring where chalcopyrite vein density and host-rock alteration increases, with increased sulphide veining typically accompanied by higher gold values.

Solstice's geological logging at Nanadie has built a geological picture comprising a widely mineralised steeply dipping host mafic intrusive (gabbro and dolerite) package flanked by finer-grained mafic rocks to the east (that are also mineralised in places), and younger granitoid rocks to the west. The host package is cut by younger (post mineralisation) felsic and mafic dykes that are generally west-dipping and aligned with the western granitoid contact and a local steeply dipping east-west fault.

Table 1. Nanadie diamond drilling – completed tails and significant intercepts (~10m downhole length @ >0.40% Cu)[1].

Significant intercepts in Table 1 are typically reported for >10m intervals at a grade of >0.4% Cu, on the basis of a 0.2% Cu and 0.1g/t Au lower cut-off and allowing for a maximum 5m internal dilution.

Stark Prospect

Copper mineralisation at Stark has been outlined over a strike length of approximately 800 metres (**Figures 1, 4 and 5**) and remains sparsely tested along strike and at depth. There is virtually no cover or oxidation profile at the prospect itself but increased transported cover toward the north masks the strike extent of the magnetic geological package. Copper (+/- nickel-PGE) mineralisation at Stark is associated with disseminated and vein style sulphides (chalcopyrite- pyrrhotite-pentlandite-pyrite) within or at the base of mafic intrusive rocks.

Stark hosts significant copper intercepts in historical RC and diamond drilling, including **40m @ 0.44% Cu** and **17m @ 0.65% Cu** in SRC21005, **10m @ 1.05% Cu** in NRC15002; and **30m @ 0.56% Cu** and **10m @ 0.49% Cu** in NRC14008[5].

Table 2. Nanadie RC drilling – completed June Quarter RC holes and significant reported intercepts (~10m downhole length @ >0.40% Cu)[4].

NANRC054	Nanadie	RC	692950	6993997	475	-60	90	328	*assays pending*	
NANRC055	Nanadie	RC	693053	6993842	475	-60	90	265	*assays pending*	

Significant intercepts in Table 1 are typically reported for >10m intervals at a grade of >0.4% Cu, on the basis of a 0.2% Cu and 0.1g/t Au lower cut-off and allowing for a maximum 5m internal dilution.

The updated geological model has opened expanded exploration corridors (Figure 5) extending north from Nanadie and Stark beneath shallow transported cover. These corridors remain largely untested and represent a high-priority focus for upcoming geophysical and drilling programs, which are currently being designed.

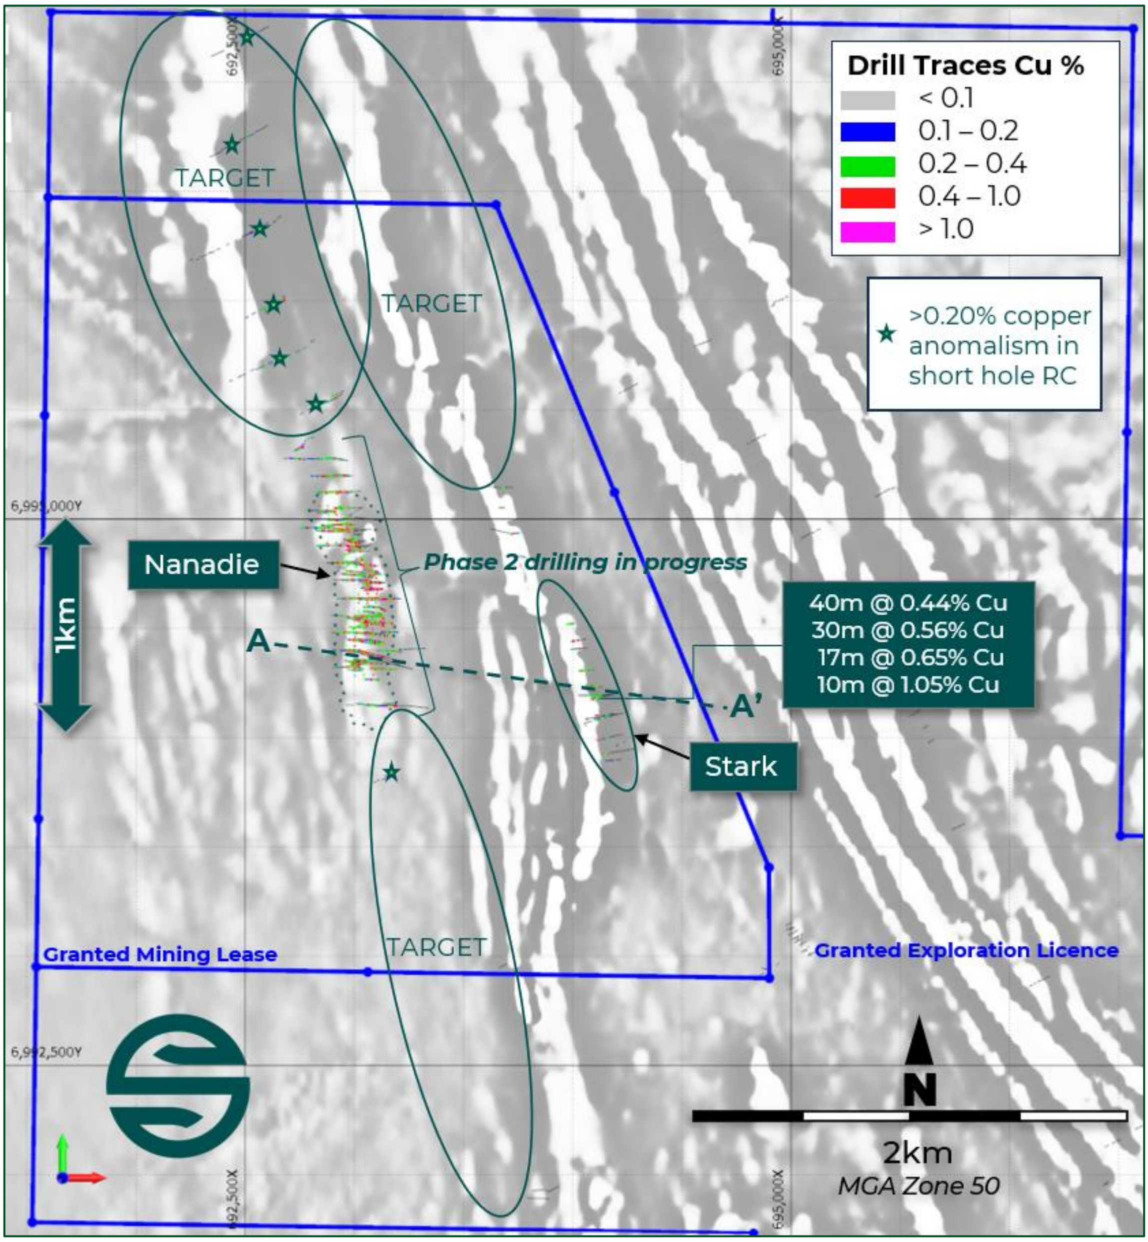

Figure 5. Nanadie regional aeromagnetic imagery and downhole copper values in all previous drilling projected to surface[1,2,4,5], showing the location of Stark, selected Stark intercepts[5], copper anomalism in historical reconnaissance drilling, and regional strike target areas.

About Nanadie

Nanadie is situated within a granted Mining Lease approximately 100km northwest of Sandstone (**Figure 6**) and includes an existing Inferred MRE of **40.4 million tonnes at 0.4% copper and 0.1g/t gold**, containing **162,000 tonnes of copper** and **130,000 ounces of gold[5]** (**Table 3**).

Mineralisation sits below a shallow soil and sand cover and weathering profile (**Photo 2**) and is distributed in a host package of mafic intrusive rocks 100-200m wide and over 1.2 km of strike. Approximately 90% of the historical MRE is fresh rock mineralisation below 40m depth.

The deposit represents a substantial base of strategic metals with strong future demand outlooks.

Table 3: Nanadie Well Historical Mineral Resource Estimate[5].

Resource Category	Material Type	Volume	Tonnes	Cu Grade (%)	Cu Metal (t)	Au Grade (g/t)	Au Metal (oz)	Ag Grade (g/t)	Ag Metal (oz)
Inferred	Oxide	1,300,000	3,500,000	0.44	16,000	0.12	13,000	0.70	74,000
	Transitional	200,000	600,000	0.45	3,000	0.12	2,000	1.50	31,000
	Fresh	11,700,000	36,300,000	0.39	143,000	0.10	115,000	1.10	1,259,000
Total		**13,200,000**	**40,400,000**	**0.4**	**162,000**	**0.10**	**130,000**	**1.00**	**1,364,000**

Note: Differences in sum totals of tonnages and grades may occur due to rounding cut-off at 0.25% Cu, reported grades and tonnages for all metals are estimated top-cut grades and tonnages.

Photo 2. Typical RC drill samples (NANRC001)[2] at Nanadie. Note the limited oxidation profile below shallow sandy soils.

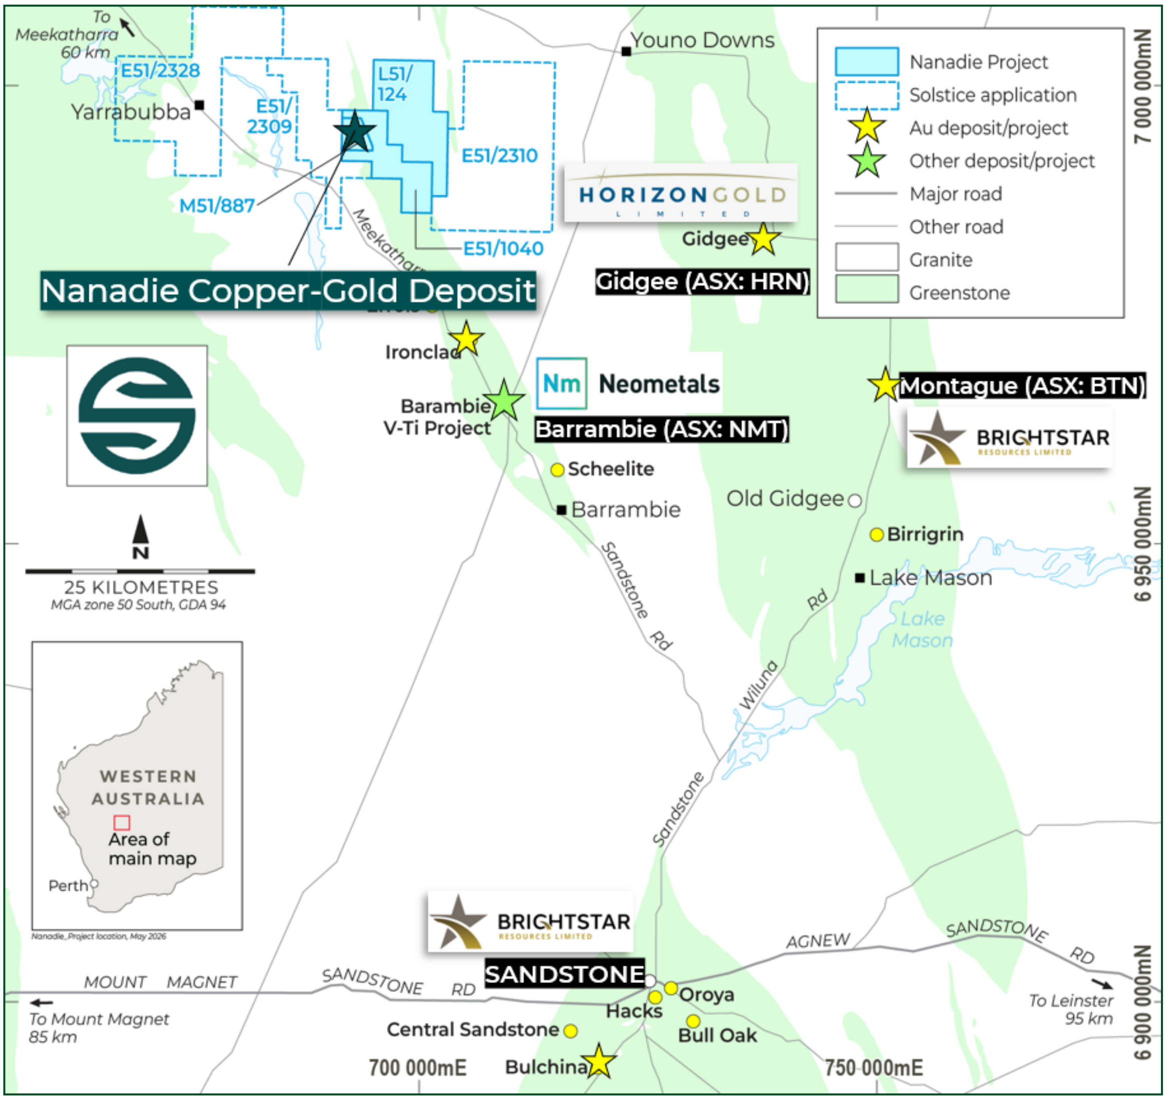

Figure 6: Location of the Nanadie Copper-Gold Project tenements NW of Sandstone

Eastern Goldfields Projects, WA

Yarri Gold Project

Solstice has curated and maintained a large **Yarri Project** landholding centred within a gold-endowed and infrastructure-rich area of WA's Eastern Goldfields, 150km NE of Kalgoorlie (**Figure 7**). Yarri has strong opportunities to create shareholder value through considered exploration drilling, particularly below transported cover that may have restricted previous exploration.

The Project currently covers an area of >1,500km^2 and extends over 150km strike along two craton-scale structural corridors that control gold mineralisation in a district hosting company-scale gold systems, as demonstrated by Northern Star Resources' (ASX: NST) **Carosue Dam** Operations, AngloGold Ashanti's (ASX: AGG) **Sunrise Dam** gold deposit, Ramelius Resources' (ASX: RMS) **Rebecca-Roe** Gold Project, and Saturn Mineral's (ASX: STN) **Apollo Hill** Gold Project (**Figure 8**).

With the Company's current focus on the Nanadie Project, a **strategic review** and internal group restructure has commenced aimed at assessing opportunities to maximise shareholder value of the Yarri, **Ponton** and **Ringlock** Projects (the **Eastern Goldfields Projects**). The Company may consider a potential full or partial sale, or a demerger of those projects from Solstice Minerals, with a distribution of shares in the demerged entity to Solstice Minerals' shareholders. Any demerger would be subject to Solstice Minerals' shareholder approval and other requisite approvals.

In the near-term the Company intends to build on its 2025 exploration successes at advanced prospects such as **Bluetooth**, **Edjudina Range** and **Statesman Well**, and work-up new greenfield gold targets for first aircore drill-testing.

During the Quarter a host of new targets became available for exploration following the granting of 11 Exploration Licences. Key targets will be progressed to heritage clearances to prepare for reconnaissance aircore drilling.

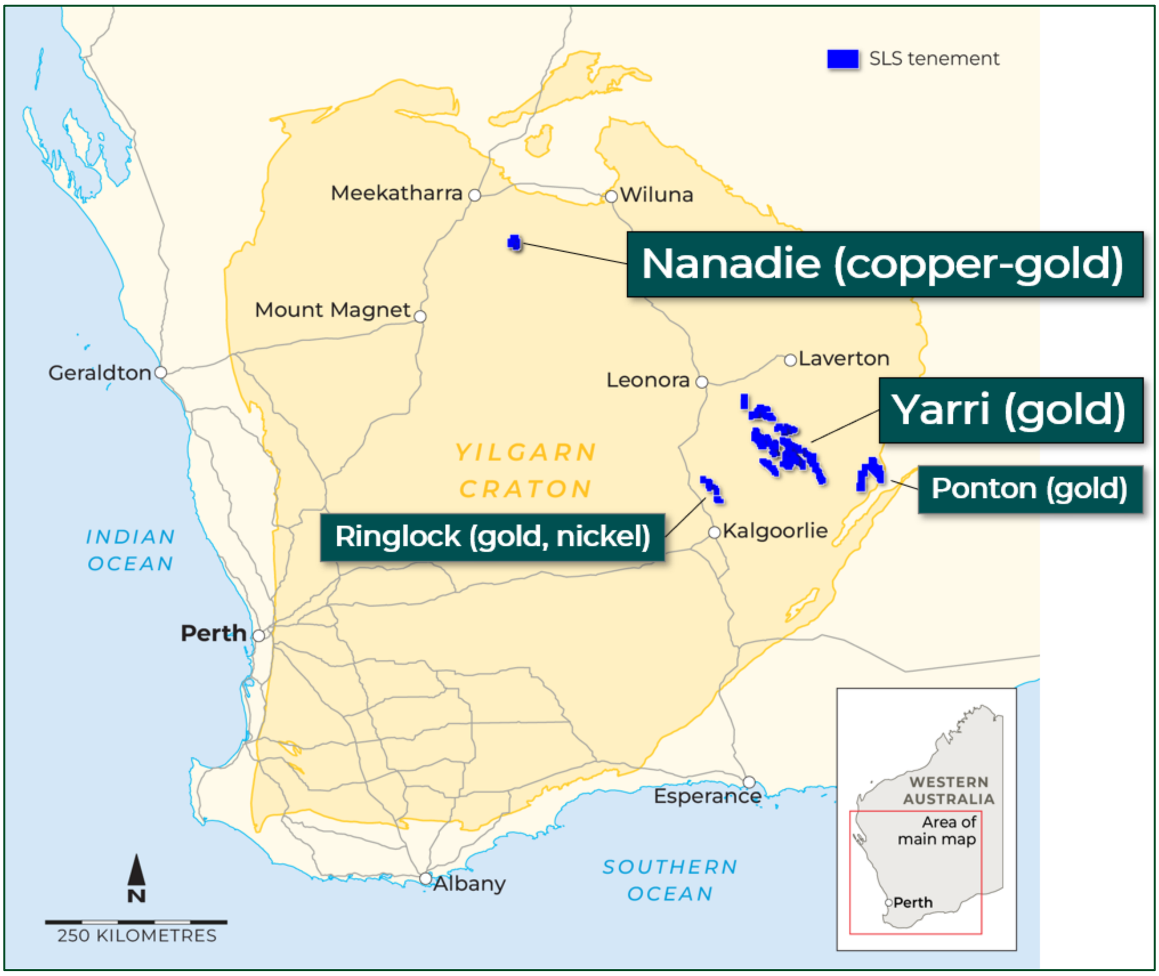

Figure 7: Location of Solstice's West Australian Projects

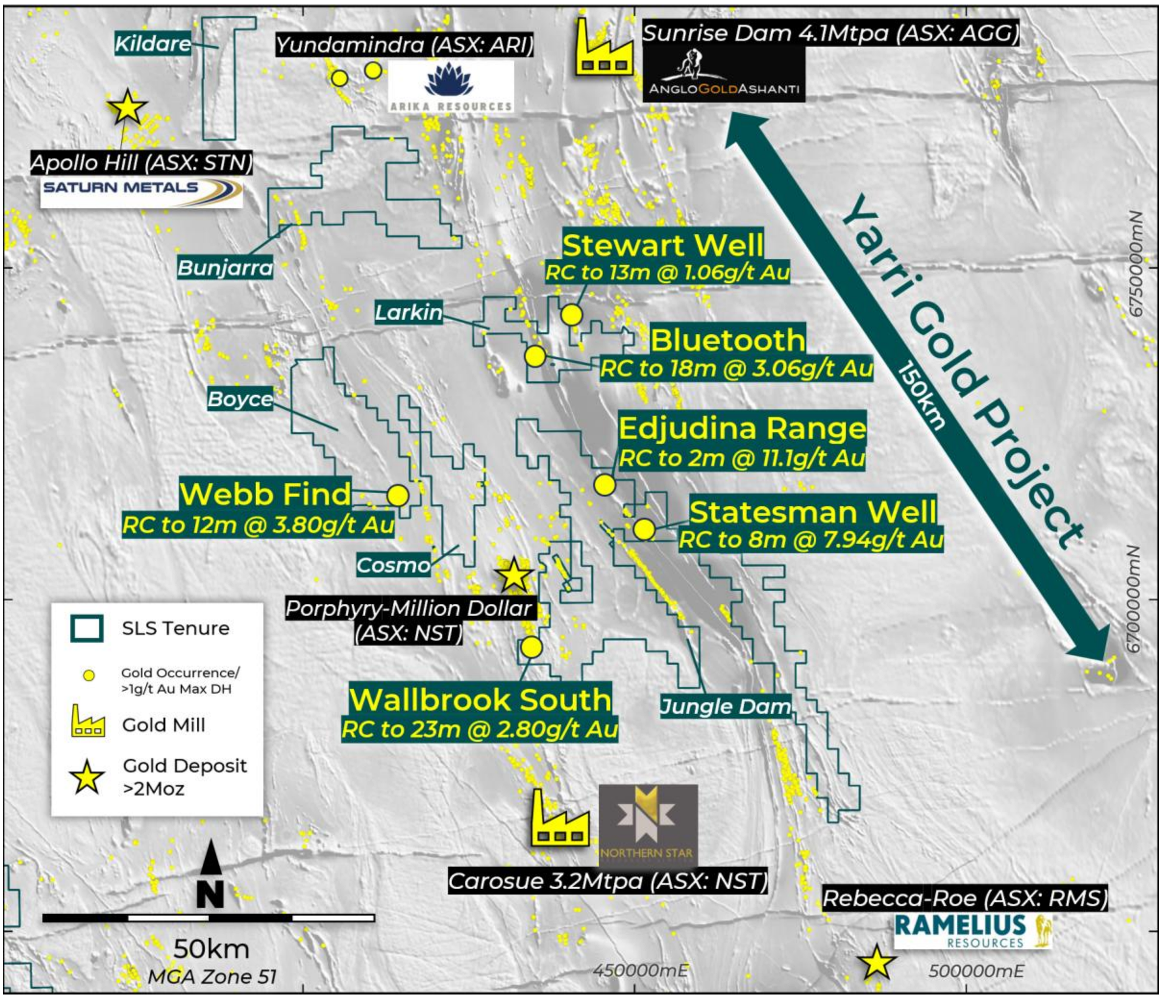

Figure 8: Solstice's >1,500km² Yarri Project tenement group and historical intercepts[8] on greyscale aeromagnetic image showing the location of key gold targets, and regional gold developments. Yellow dots are documented gold prospects and all drillholes with >1g/t Au gold intercepts.

Bluetooth Gold Prospect

Preparations were made for continued infill RC drilling at Bluetooth, a prospect that emerged as a new gold discovery over 2025, with the Company's shallow RC drilling outlining thick, shallowly dipping panels of near-surface oxide gold mineralisation. Gold intercepts extend over a 900m strike extent of mineralised chert and quartz veining (**Figure 9**) and intercepts are interpreted to be close to true width (**Figure 10** and **Figure 11**).

Key RC results include **18m @ 3.06g/t Au** (within a combined **30m @ 2.06g/t Au**), **29m @ 1.58g/t Au**, **20m @ 1.98g/t Au**, **23m @ 1.38g/t Au**, **15m @ 1.90g/t Au** and **12m @ 2.86g/t Au**[9].

The **overall geometry of Bluetooth is favourable for open pit extraction**, and the strong intercepts to date demonstrate the potential for this discovery to provide valuable near-surface gold ounces in an active mining district.

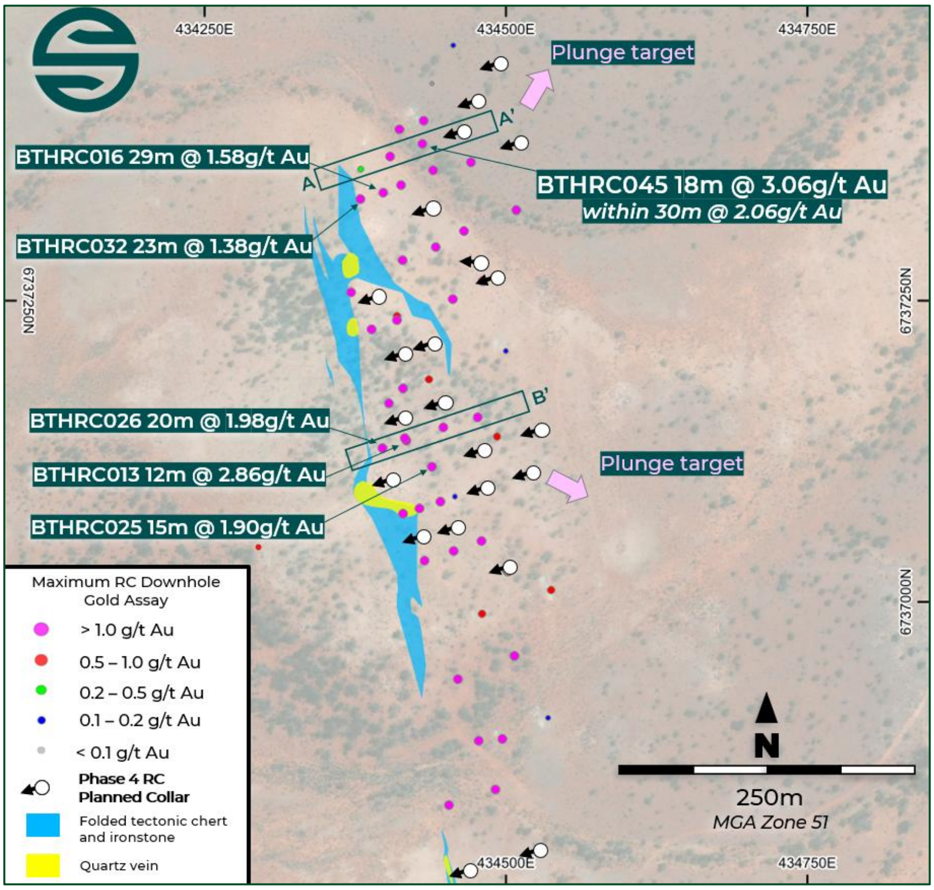

Figure 9: Bluetooth Gold Prospect showing all RC drill collars coloured for peak down-hole gold value, planned Phase 4 RC drillholes, selected gold intercepts[9], and the outcrop of the mineralised chert and ironstone horizon.

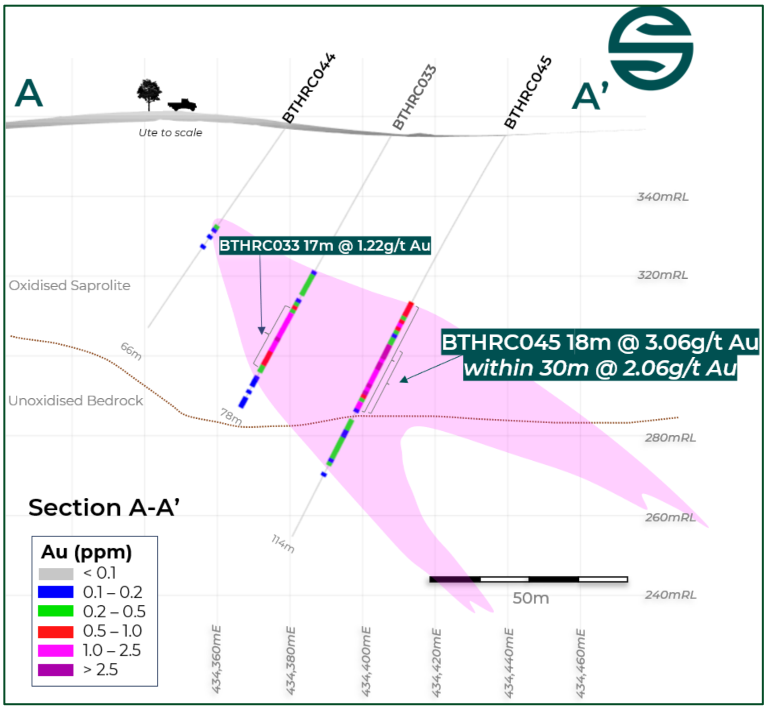

Figure 10: Bluetooth Gold Prospect cross-section A-A' (see Figure 5) showing Solstice's RC gold intercepts (white text)[9].

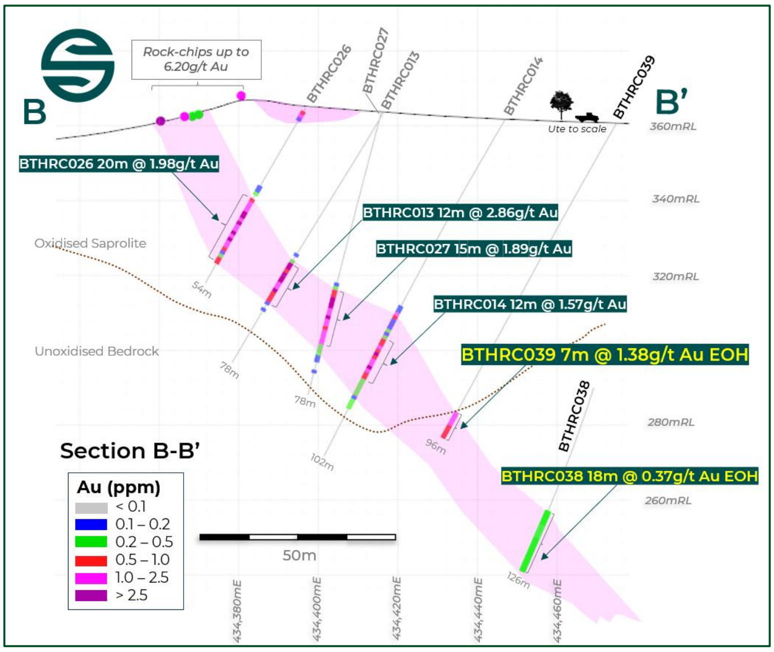

Figure 11: Bluetooth Gold Prospect cross-section B-B' (see Figure 5) showing Solstice's oxide gold intercepts (white text) and fresh rock intercepts (yellow text)[9].

Pipeline Projects

The Company has built a strong list of exploration opportunities at both Yarri and at the **Ringlock Project** near Kalgoorlie (**Figure 8**), and the grant of new tenure has unlocked an array of gold exploration targets, including high-priority untested strike targets at **Edjudina Range** and **Statesman Well**.

Advanced gold targets under exploration licence application at Yarri include **Webb Find** (historical shallow RC results including **12m @ 3.80g/t Au**, **8m @ 2.74g/t Au** and **6m @ 3.85g/t Au**), **Wallbrook South** (RC results to **23m @ 2.80g/t Au**), and **Stewart Well** (wide anomalous gold zones in historical RC drilling to **10m @ 1.06g/t Au**)[8] (**Figure 8**). Each of these targets is primed for additional step-out and/or follow-up RC drilling once permitting is in place.

Solstice also holds tenure at the **Ponton Project**, (**Figure 7**) a large greenfield gold project in the eastern Yilgarn Block. Exploration at Ponton is subject to completion of greenfield-appropriate heritage and access documentation.

2. CORPORATE AND CASH POSITION

Solstice holds approximately **$45.26 m** in cash as at 30 June 2026.

3. ADDITIONAL ASX LISTING RULE DISCLOSURES

In accordance with ASX Listing Rule 5.3.1, payments for exploration activities during the Quarter totalled $3,190,000 (item 1.2(a) of the Appendix 5B). Details of exploration activities undertaken during the Quarter are provided above.

In accordance with ASX Listing Rule 5.3.2, the Company confirms that there were no mining production and development activities undertaken during the Quarter.

In accordance with ASX Listing Rule 5.3.3, details of tenements are provided in Section 4 below.

In accordance with ASX Listing Rule 5.3.5, the payment of $163,000 reported in Item 6.1 of the Appendix 5B to related parties of the entity and their associates consisted of Directors' fees and salaries (including superannuation) paid to the Directors.

4. TENEMENT SCHEDULES

List of tenements held by Solstice Minerals (directly or beneficially) as at end of the Quarter:

Project	Licence/Tenement Number	Registered Holder	Beneficial Interest at end of Quarter
Yarri	E31/1121	Solstice Minerals Limited	100%
	E31/1134	Solstice Minerals Limited	100%

FORWARD-LOOKING STATEMENTS

This Report may contain certain forward-looking statements, guidance, forecasts, estimates, prospects or projections in relation to future matters that may involve risks or uncertainties and may involve significant items of subjective judgement and assumptions of future events that may or may not eventuate (**Forward-Looking Statements**). Forward-Looking Statements can generally be identified by the use of forward-looking words such as "anticipate", "estimates", "will", "should", "could", "may", "expects", "plans", "forecast", "target" or similar expressions and may include, without limitation, statements regarding plans, strategies and objectives of management, anticipated production and expected costs. Indications of, and guidance on future earnings, cash flows, costs, financial position and performance are also Forward-Looking Statements.

Persons reading this Report are cautioned that such statements are only predictions, and that actual future results or performance may be materially different. Forward-Looking Statements, opinions and estimates included in this Report are based on assumptions and contingencies which are subject to change, without notice, as are statements about market and industry trends, which are based on interpretation of current market conditions. Forward-Looking Statements are provided as a general guide only and should not be relied on as a guarantee of future performance.

No representation or warranty, express or implied, is made by Solstice that any Forward-Looking Statement will be achieved or proved to be correct. Further, Solstice disclaims any intent or obligation to update or revise any Forward-Looking Statement whether as a result of new information, estimates or options, future events or results or otherwise, unless required to do so by law.

COMPLIANCE STATEMENT

The information in this Report that relates to previously Exploration Results and Estimates of Mineral Resources has been extracted from the ASX announcements as noted in the References and referenced in the text (**Original Announcements**). In relation to the Company's previously released Exploration Results and Estimates of Mineral Resources, the Company confirms that it is not aware of any new information or data that materially affects the relevant information included in the Original Announcements and, in the case of Estimates of Mineral Resources, that all material assumptions and technical parameters underpinning the estimates in the Original Announcements continue to apply and have not materially changed. Solstice confirms that the form and context in which the Competent Persons' findings are presented have not been materially modified from the Original Announcements.

Appendix 5B

Mining exploration entity or oil and gas exploration entity quarterly cash flow report

Name of entity

SOLSTICE MINERALS LIMITED

ABN	Quarter ended ("current quarter")
67 150 154 162	**30 JUNE 2026**

Consolidated statement of cash flows		Current quarter $A'000	Year to date (12 months) $A'000
1.	**Cash flows from operating activities**		
1.1	Receipts from customers	-	-
1.2	Payments for		
	(a) exploration & evaluation	(3,190)	(5,930)
	(b) development	-	-
	(c) production	-	-
	(d) staff costs	(165)	(473)
	(e) administration and corporate costs	(47)	(463)
1.3	Dividends received (see note 3)	-	-
1.4	Interest received	266	551
1.5	Interest and other costs of finance paid	(2)	(4)
1.6	Income taxes paid	-	-
1.7	Government grants and tax incentives	-	-
1.8	Other (GST received/(paid))	(476)	(392)
1.9	**Net cash from / (used in) operating activities**	**(3,614)**	**(6,712)**

2.	**Cash flows from investing activities**		
2.1	Payments to acquire or for:		
	(a) entities	-	-
	(b) tenements	-	(3)
	(c) property, plant and equipment	(42)	(44)
	(d) exploration & evaluation	-	-
	(e) investments	-	-
	(f) other non-current assets	-	-

Consolidated statement of cash flows		**Current quarter $A'000**	**Year to date (12 months) $A'000**
2.2	Proceeds from the disposal of:		
	(a) entities	-	-
	(b) tenements	-	-
	(c) property, plant and equipment	-	-
	(d) investments	-	-
	(e) other non-current assets	-	-
2.3	Cash flows from loans to other entities	-	-
2.4	Dividends received (see note 3)	-	-
2.5	Other (provide details if material)	-	-
2.6	**Net cash from / (used in) investing activities**	**(42)**	**(47)**

3.	**Cash flows from financing activities**		
3.1	Proceeds from issues of equity securities (excluding convertible debt securities)	32,603	32,603
3.2	Proceeds from issue of convertible debt securities	-	-
3.3	Proceeds from exercise of options	1,542	6,241
3.4	Transaction costs related to issues of equity securities or convertible debt securities	(1,728)	(1,728)
3.5	Proceeds from borrowings	-	-
3.6	Repayment of borrowings (leases)	(18)	(69)
3.7	Transaction costs related to loans and borrowings	-	-
3.8	Dividends paid	-	-
3.9	Other	-	-
3.10	**Net cash from / (used in) financing activities**	**32,400**	**45,256**

4.	**Net increase / (decrease) in cash and cash equivalents for the period**		
4.1	Cash and cash equivalents at beginning of period	16,512	14,967
4.2	Net cash from / (used in) operating activities (item 1.9 above)	(3,614)	(6,712)
4.3	Net cash from / (used in) investing activities (item 2.6 above)	(42)	(47)
4.4	Net cash from / (used in) financing activities (item 3.10 above)	32,400	37,048

Consolidated statement of cash flows		**Current quarter $A'000**	**Year to date (12 months) $A'000**
4.5	Effect of movement in exchange rates on cash held	-	-
4.6	**Cash and cash equivalents at end of period**	**45,256**	**45,256**

5.	**Reconciliation of cash and cash equivalents** at the end of the quarter (as shown in the consolidated statement of cash flows) to the related items in the accounts	**Current quarter $A'000**	**Previous quarter $A'000**
5.1	Bank balances	41	29
5.2	Call deposits	715	4,983
5.3	Bank overdrafts	-	-
5.4	Other – Term deposits	44,500	11,500
5.5	**Cash and cash equivalents at end of quarter (should equal item 4.6 above)**	**45,256**	**16,512**

6.	**Payments to related parties of the entity and their associates**	**Current quarter $A'000**
6.1	Aggregate amount of payments to related parties and their associates included in item 1	163
6.2	Aggregate amount of payments to related parties and their associates included in item 2	-

Note: if any amounts are shown in items 6.1 or 6.2, your quarterly activity report must include a description of, and an explanation for, such payments.

7.	**Financing facilities** *Note: the term "facility' includes all forms of financing arrangements available to the entity.* *Add notes as necessary for an understanding of the sources of finance available to the entity.*	**Total facility amount at quarter end $A'000**	**Amount drawn at quarter end $A'000**
7.1	Loan facilities	-	-
7.2	Credit standby arrangements	-	-
7.3	Other (please specify)	-	-
7.4	**Total financing facilities**	-	-
7.5	**Unused financing facilities available at quarter end**		-
7.6	Include in the box below a description of each facility above, including the lender, interest rate, maturity date and whether it is secured or unsecured. If any additional financing facilities have been entered into or are proposed to be entered into after quarter end, include a note providing details of those facilities as well.		

8.	**Estimated cash available for future operating activities**	**$A'000**
8.1	Net cash from / (used in) operating activities (item 1.9)	(3,614)
8.2	(Payments for exploration & evaluation classified as investing activities) (item 2.1(d))	-
8.3	Total relevant outgoings (item 8.1 + item 8.2)	(3,614)
8.4	Cash and cash equivalents at quarter end (item 4.6)	45,256
8.5	Unused finance facilities available at quarter end (item 7.5)	-
8.6	Total available funding (item 8.4 + item 8.5)	45,256
8.7	**Estimated quarters of funding available (item 8.6 divided by item 8.3)**	13

Note: if the entity has reported positive relevant outgoings (ie a net cash inflow) in item 8.3, answer item 8.7 as "N/A". Otherwise, a figure for the estimated quarters of funding available must be included in item 8.7.

8.8 If item 8.7 is less than 2 quarters, please provide answers to the following questions:

8.8.1 Does the entity expect that it will continue to have the current level of net operating cash flows for the time being and, if not, why not?

Answer:
N/A

8.8.2 Has the entity taken any steps, or does it propose to take any steps, to raise further cash to fund its operations and, if so, what are those steps and how likely does it believe that they will be successful?

Answer:
N/A

8.8.3	Does the entity expect to be able to continue its operations and to meet its business objectives and, if so, on what basis?
	Answer: N/A
	Note: where item 8.7 is less than 2 quarters, all of questions 8.8.1, 8.8.2 and 8.8.3 above must be answered.

Compliance statement

1 This statement has been prepared in accordance with accounting standards and policies which comply with Listing Rule 19.11A.

2 This statement gives a true and fair view of the matters disclosed.

Date: 21 July 2026

Authorised by: By the Solstice Minerals Limited Board of Directors
(Name of body or officer authorising release – see note 4)

Notes

1. This quarterly cash flow report and the accompanying activity report provide a basis for informing the market about the entity's activities for the past quarter, how they have been financed and the effect this has had on its cash position. An entity that wishes to disclose additional information over and above the minimum required under the Listing Rules is encouraged to do so.
2. If this quarterly cash flow report has been prepared in accordance with Australian Accounting Standards, the definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report. If this quarterly cash flow report has been prepared in accordance with other accounting standards agreed by ASX pursuant to Listing Rule 19.11A, the corresponding equivalent standards apply to this report.
3. Dividends received may be classified either as cash flows from operating activities or cash flows from investing activities, depending on the accounting policy of the entity.
4. If this report has been authorised for release to the market by your board of directors, you can insert here: "By the board". If it has been authorised for release to the market by a committee of your board of directors, you can insert here: "By the [*name of board committee – eg Audit and Risk Committee*]". If it has been authorised for release to the market by a disclosure committee, you can insert here: "By the Disclosure Committee".
5. If this report has been authorised for release to the market by your board of directors and you wish to hold yourself out as complying with recommendation 4.2 of the ASX Corporate Governance Council's *Corporate Governance Principles and Recommendations*, the board should have received a declaration from its CEO and CFO that, in their opinion, the financial records of the entity have been properly maintained, that this report complies with the appropriate accounting standards and gives a true and fair view of the cash flows of the entity, and that their opinion has been formed on the basis of a sound system of risk management and internal control which is operating effectively.
